I am a seasoned, experienced, and dedicated IT & cybersecurity professional with nearly 25 years in professional computer experience and online expertise that dates back to the 1980s. My expertise is in System Architecting and design, as well as vulnerability management and education.

Born in Iceland, I spent much of my adult life in Seattle, Washington, where I was located in close proximity to the development of a ground-breaking form of technology that would revolutionize not only the tech industry but the world as we know it.

In the early 1980s, while still a teenager, I began to explore the industry just as a hobby – and by the 1990s, I had turned that hobby into a profession. In fact, you could say that I was a pioneer in the birth of the internet when I worked as a network engineer for Microsoft during its infancy. I have been online since the mid-1980s, exploring and communicating, even though the first public web browser wouldn't hit the market until 1994.

As a proven, tested, and successful IT professional, I spent much of my 25 years in the industry in various IT positions, working as a data center technician and network engineer for large internet service providers such as Microsoft and T-Mobile US Inc. Also, my technical abilities extend far beyond simple network engineering. I am well-versed in the areas of system design, automation, tooling, scripting, and even vendor and product selection.

My latest side venture, InfoSec Help, is specifically designed to offer my networking expertise and my approach to cybersecurity to those who may not be fully aware of the types of threats that can plague their systems. From home computers to small businesses to large organizations, my professionalism, my expertise in cybersecurity and network engineering, and my steadfast dedication to helping folks to secure their systems – these qualities are what separate me from the pack.

As part of my work with InfoSecHelp, I have authored a book available on Amazon as well as traditional bookstores (they can order it if they don't have it stock) on the topic of cybersecurity for non-technical folks.

Every day, my passion for computers is what drives my motivation to continue finding new ways to help folks acclimate themselves with the changing digital landscape. And by assisting people to remain safe online and avoid falling for scams that could damage their systems or their wallets, I can help to pave the way for a safer internet – as a true internet pioneer should.

In my free time, I enjoy the simple things in life, like listening to music, attending live theater events, or going ballroom dancing. Additionally, I enjoy volunteering for organizations that help the community around him. I am a volunteer for the American Red Cross, Public Health Reserve Core, and other similar organizations. For me, nothing is more important than finding ways to enjoy life, whether that be through computers, working with others, or listening to my favorite album.
